MICRO DISK

Accurately measures small charges below the range of the standard Auto-Disk Powder Measure. Perfect for light target loads and small capacity cases. Six cavities range from 1.1 to 2.5 grains of Bullseye. Proportional amounts of other powders.

DOUBLE DISK KIT

Stack two disks to not only double the capacity, but enable adjustment as fine as .1 to .2 grain. Over 13.000 loads easily calculated from the expanded selection chart on reverse. Kit includes set of 4 extra disks, 2 hopper risers and screws.

INSTRUCTIONS FOR INSTALLATION OF THE DOUBLE DISK KIT

1 Install the spacers between the hopper and casting as shown above, using the longer screws provided.

2 Now you can install two (2) disks at a time. If using different size cavities, always be certain the smaller cavity is on the top next to the hopper. Otherwise, the smaller hole will have a ledge to retain some of the powder.

> CAUTION Never use cavities with great difference in size as some of the powder could leak past the cavity into the center opening of the disk. This will cause an overcharge. The safe combinations are listed on the schedule.

3 Check and double check that you have the correct cavities in place.

4 Weigh your charge to be sure.

90681 SAFETY POWDER SCALE

RIFLE **CHARGING DIE**

Use the Auto-Disk Powder Measure to load your rifle cartridges with this Rifle Charging Die. Fits all calibers from the 22 Hornet through the 308 Winchester, Exclusive, tapered drop tube speeds even large charges through the .22 caliber orifice, without bridging.

90194 RIFLE CHARGING DIE

Safety and accuracy are the most important features. Easy to read and set. Calibrated with weights traceable to the UNITED STATES BUREAU OF **STANDARDS.** Even if you already own a combination bullet and powder scale, you will want a Lee Safety Powder Scale.

90792 ADJUSTABLE CHARGE BAR

MICROMETER ADJUSTABLE CHARGE BAR

A superior and affordable adjustable charge bar. Infinitely adjustable between .28 cc and I.6 cc. Great for load development or precise charges. Lifetime nylon with solid brass, zero backlash micrometer.

90302 MICRO DISK AND SPACER

Ammunition reloading can be dangerous if done improperly and should not be attempted by persons not willing and able to read and follow instructions exactly. Children should not be permitted to reload ammunition without strict parental supervision. Always wear safety glasses when reloading and shooting. Ammunition loaded with these tools and data should only be used in modern guns in good condition. We do not accept responsibil-

ity for ammunition loaded with these tools or data as we have no control over the manufacture and storage of components or the loading procedure and techniques, Primers and gun powders, like gasoline and matches, can be dangerous if improperly handled or misused.

IT IS YOUR RESPONSIBILITY TO ENSURE THE SAFETY OF YOUR LOADS

Listed below are some of the factors that will help keep you out of trouble. Some are obvious, but worth repeating,

Empty the hopper when not in use. Always return the unused powder to the original container for storage. With the Lee Turret Press, simply remove the entire turret and pour the powder from the hopper.

To prevent double charges, be sure to cycle the press only once. If in doubt, empty the case and do it again. A double charge is almost always a sufficient overload to blow up the gun and possibly injure the shooter.

- Do not use for black powder. Black powder is an explosive.
- Do not smoke or handle powder near an open flame.
- Check to be sure the correct cavity is in place.

Check to be sure the correct powder is being used for the bullet weight and cartridge selected.

Check to be sure all the powder has cleared the drop tube.

The following are factors that will increase pressures. Some will be dangerous.

- Do not use more powder than recommended.
- Do not use a heavier bullet than recommended.
- Do not seat the bullet deeper than normal.
- Do not use magnum primers unless using a slow burning ball powder.
- Greatly oversize bullets, excessively hard bullets or cases that
- are too long will cause higher pressures.

High temperatures or cartridges that were stored in a hot car or trunk will produce higher pressures.

Guarantee

LEE RELOADING PRODUCTS are guaranteed not to wear out or break from normal use for two full years or they will be repaired or replaced at no charge if returned to the factory. Any Lee product of current manufacture, regardless of age or condition, will be reconditioned to new, including a new guarantee, if returned to the factory with payment equal to half the current retail price.

PRINTED IN USA

convenience.

ASSEMBLY

install spring return lever and spring.

CHANGING DISKS

Remove brass hopper nuts and remove hopper. Install correct disk; [FIG. 2] the proper cavity number should be directly above the return lever. Reinstall hopper. Be certain the hopper is installed to allow clear view of the drop tube. Hint: [FIG. 3] If you are using the positive pull back lever, you can change disks without removing the hopper. Simply slacken the

LEE PROAUTO-DISK POWDER MEASURE

Your new Pro Auto Disk incorporates all of the most requested features. Teflon coated body, large capacity, quick-change hopper with shut-off valve, easy-on swivel actuator, elastomer wiper and positive pull back lever all combine to make this the best powder measure money can buy. The case itself actuates the measure while the neck is being flared. The powder measure is actuated during the presses greatest mechanical advantage. This insures a smooth, even action of the measure. The elastomer wiper reduces powder leakage and prevents granule shearing. Super slippery teflon coated is wear resistant and reduces friction between the disk and body. The swivel adapter and quick change hopper make the Pro Auto-Disk unmatched in

Install your Lee Powder-Through-Expanding Die in your CHARGE DISK press as directed in the die instructions. Remove the powder funnel adapter and screw the Pro Auto-Disk in its place by simply turning the knurled adapter finger tight. The powder measure can be installed in any position. (Be certain the lock and "O" ring are installed). Attach bead chain to shell plate carrier as directed in the press instructions. Loop free end of bead chain [FIG. 1] through the pull back lever as shown. NOTE If you are installing your measure on a single station or turret type press,

Photos illustrate typical chain attachment on Lee Progressive Presses. Installation on other brands require some ingenuity on your part to find a good attachment.

your measure was shipped as part of a Turret Press Kit, it comes with the spring return lever and spring only. If your measure was hipped as part of a Progressive Press Kit, it would include the head chain return system only. If your measure was shipped as a single nroduct, it would contain both vstems

bead chain and push the disk through the front of the measure. CAUTION Be sure you have the correct

cavity for the powder, bullet and cartridge selected. The wrong one might give a dangerous charge that could damage the gun and seriously injure the shooter.

WARNING Exercise extreme caution to ensure you do not cycle the measure more than once on each case. If in doubt, remove the case and empty the powder into the hopper. Frequently look through the drop tube to confirm all powder has cleared.

BEAD CHAIN

This chart is a guide to determine the APPROXIMATE CAPACITY of all popular brands for each cavity. Actual charges may vary due to manufacturing toler-ances of the cavities, powder and method of use. These charges are not safe to use for maximum loads without first checking them on a scale. Most of these loads are unusable for many cartridges. However, by not eliminating them at an arbitrary point, no mistaken inference of usable range could be concluded.

Note Coarse flake powder, such as Red Dot and Green Dot, can give light charges in the smaller cavities. (.40 or smaller).

©2009 Lee Precision, Inc.

Weighing Charges Maximum Loads Must Be Weighed If you check charges on a scale, be sure to take one out of a normal loading sequence. This is especially important when the measure is used on a Turret Press as the powder packs in during the other loading operations. Powder densities can vary more than 16% and still be considered within toler-ance by the powder manufacturer.

For safety reasons, you will frequently find charges less than those listed on the charge chart. However, should you find one that is 5% more than the listed load we would like to know about it. **Volumes of Two Disks Stacked** Below are all of the practical combinations of cavities. **Caution: Some combinations** are not listed because great size differences can be dangerous if the powder leaks past the metering cavity into the disk's center.
